

Website design & development

Selected work. Every project below is live, and every card links straight to it.

STANDARD BUSINESS WEBSITE

\$274 one-time

First year of hosting included free. Renews at \$150/year — or take the complete files and host them anywhere at no extra charge. No contracts, no monthly agency fee.

DATABASE-DRIVEN & E-COMMERCE

Quoted on scope

Online stores, customer logins, booking or quoting systems, and anything backed by a database are priced on the build. Larger builds are quoted on scope.

🔍 Why your business needs a website

Before anyone calls you, they look you up. What they find decides whether the call happens.

-  **You control what they see**
Without a site, the first result is a public directory listing you didn't write and can't edit. With one, you decide what a customer reads first.
-  **It answers the trust question**
Credentials, insurance, licence numbers, real photos of your work. The things someone checks before they hand over money.
-  **It works when you can't answer**
Enquiries arrive while you're driving, on a job, or asleep. Every form lands in your inbox with the details already filled in.
-  **You own it outright**
A social profile is rented — the platform sets the rules and can change them. Your own site is an asset that stays yours.

📈 How customers find you without paying for ads

Paid ads stop the moment you stop paying. Search results you earn keep working. Three ways a site brings you enquiries you didn't buy:

People search your name

Someone hears about you, or sees your truck, and searches. Your site is what they find — not a half-finished directory entry.

People search what you do

"Flatbed hauling in Dallas", "emergency plumber near me". Pages written around the services and areas you actually cover are what surface here.

Search engines can read it

Clean structure, fast loading, proper page titles and descriptions. Done at build time, not bolted on later as an upsell.

It compounds

A page you publish once keeps earning. Unlike ads, the cost doesn't repeat every month for the same visitor.

We are honest about this: search results build over months, not days, and no one can promise a specific position. What we can promise is that the technical groundwork is done properly from day one.

What you get

-  **Custom design** built around your business, not a stock template
-  **Mobile-first** — fast on phones, one-tap click-to-call
-  **Contact & quote forms** delivered straight to your inbox
-  **Search fundamentals** done properly at build time
-  **Two rounds of revisions** included

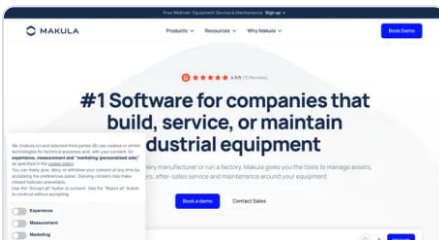

First year of hosting included free

-  Custom domain name
-  SSL certificate
-  Global CDN for fast loading worldwide
-  24/7 uptime monitoring
-  Monthly backups

Common questions

Do I own the website?

Yes, outright. If you would rather host it yourself, we hand over the complete files at no extra charge — they will run on GoDaddy, Bluehost, Cloudflare, Netlify or anywhere else.

How long does it take?

Most websites are completed within 5–7 business days of receiving your details. You get a preview link to review before anything is published.

What if I want changes afterwards?

Two rounds of revisions are included with every project. Beyond that, further changes are \$50/hour. Most clients are happy after the first round.

What does the \$150/year renewal cover?

Domain, SSL, the global CDN, 24/7 uptime monitoring and monthly backups — the technical maintenance, handled, so you can get on with running the business. It is optional; you can self-host instead.

Let's talk about your site

Tell us what you need and we will come back with a straight answer on scope, price and timing.
